

How to show OpenWeatherMap

GPX Viewer supports showing OpenWeatherMap weather overlays over online maps. OpenWeatherMap works only with online maps and it also needs a device to be connected to the internet.

Below are step-by-step instructions on how to show OpenWeatherMap.

1. First off you need to start GPX Viewer.
2. On the map screen tap on ... button in top right corner in **top toolbar** and from menu select **OpenWeatherMap**. If you have hidden this button, open the left main menu, then tap on the **Settings** button. In the settings screen tap on the **Maps** button and then **OpenWeatherMap**.
3. In the shown dialog choose some overlay that you want to be shown over the online map in GPX Viewer.

Below is a video showing the instructions above:
