2025/10/21 14:52 1/3 Weather forecast (PRO only)

## Weather forecast (PRO only)

Weather forecast is a built-in feature within GPX Viewer Pro. This functionality can be accessed by clicking on Weather in the left main menu. The forecast is displayed at the current location where the device is present. To refresh the forecast, users need to click on the three dots on the top of the screen, where the option appears.

In the view users can see:

- **Day and time** to which values for these indicators are predicted.
- Temperature of the air
- Apparent temperature
- Moon current moon phase
- Precipitation amount of precipitation
- Cloudiness the percentage of clouds covering the sky
- Humidity the percentage of in the air
- Type of the weather cloudy/rainy/sunny/partially cloudy/snowy
- Wind speed of the wind
- Sunrise the time of sunrise
- Sunset the time of sunset
- **Visibility** visibility conditions(after unrolling)
- Pressure air pressure (after unrolling)
- **UV Index** (after unrolling)
- Dew point temperature to which air must be cooled to become saturated with water vapour (after unrolling)

Underneath this information users can find an hourly temperature graph. If you click on any point of the graph at a certain time, the other indicators are updated to their predicted value in that hour.

In the lower part of the screen, you can find a summary for each day of the upcoming 7 days and after clicking on them their details are described in the main weather view on the top of the screen.
