

Online maps

Online maps are maps which can be used only when device is **connected to internet**. However GPX Viewer supports **caching** of maps. When you **show** some locations on map when your device is online it will cache that locations and when you turn your device offline and restart GPX Viewer and show that locations again they will be loaded from **cache**. But we don't recommend relying on this feature because Android system can at any time decide to **erase** this cached data.

Custom online maps

GPX Viewer is supporting adding your own online maps by adding server url addresses in xyz format. Here you can find tutorial [how to add custom online map](#).

Previews of online maps

Below you can preview online maps which are available in GPX Viewer.

Google Maps

Google Maps support showing normal, terrain and satellite online maps.

[View Google Maps](#)

OpenStreetMap
