

Track and waypoint importing and exporting

GPX Viewer PRO supports importing of gpx, gpz, kml and kmz files from device storage or cloud storages like iCloud. It also supports exporting into gpx and kml files. Gpx and kml files contain tracks, routes and waypoints. Gpz and kmz files are just compressed (zip archives) gpx and kml files respectively. You can find more information about gpx files on this [website](#) and more information about kml files can be found on this [website](#).

On this help page there is information on [How to import track or waypoint](#). Also there is information on [How to export track or waypoint](#).
